PROJECTS

Train Ticket Booking System

Description: Developed a web-based application to allow users to book, cancel, and manage train tickets with secure payment options. Integrated seat availability updates in real time.

Consumer Spending Patterns Analysis

Description: Developed a data analytics dashboard using Python and Streamlit to analyze consumer spending data, perform data cleaning and preprocessing, visualize trends, and apply K-Means clustering for customer segmentation and business insights.

Twitter Sentiment Analysis

Description: Built a Python-based Twitter sentiment analysis system to classify tweets as positive, negative, or neutral. Performed data cleaning, preprocessing, and sentiment classification to extract meaningful insights from social media data.
